Anderson Silva

AI Engineer · TypeScript / Node.js · Real-time & Multiplayer Systems

São Paulo, Brazil (UTC–3) · Open to remote work worldwide · anderson@kolja.com.br · kolja.com.br/portfolio · linkedin.com/in/oriontis

SUMMARY

AI-native software engineer, building software since 2010. I design systems and direct AI coding agents to build them, holding every step to automated tests, which lets me ship large, working systems quickly. Recent work spans multi-agent orchestration, AI agents for businesses, identity and security infrastructure, real-time 3D for architecture, a microkernel operating system, and games released on itch.io.

SKILLS

AI & LLM: multi-agent orchestration, agentic coding workflows, provider-agnostic multi-model routing, local LLMs, adversarial testing

Backend: TypeScript, Node.js, Python, PostgreSQL / Supabase, Convex, SQLite, JSON-RPC, SSE, REST APIs

Security & identity: OIDC / SSO, passkeys / WebAuthn, JWS / JWKS, X25519, AES-GCM, HKDF, DTLS

Games & graphics: Godot 4 (GDScript), Jolt physics, server-authoritative networking, Three.js, WebGL / GLSL, Metal / MetalFX

Systems & 3D: C, microkernel and Linux systems (Debian live images), Lua, Blender / Cycles, Unity, Cloudflare Workers

Mobile & desktop: Android (Java, WebView), Swift / macOS, progressive web apps, browser extensions

Signal processing: Web Audio API, DSP, acoustic modem design, sensor signal decoding

EXPERIENCE

Founder — N6C

AI services for businesses · Jun 2026 – present

- Built a WhatsApp customer assistant in production and a local real-estate agent product: client-owned connectors (Google, Apple, Zoom, Teams, WhatsApp Business, HubSpot), human approval for every login and send, 387 automated tests.

Real-time 3D Engineer — Kanzen Tech (client work)

Remote · Oct 2026

- Reworked the realism of ACESA, a web walkthrough of residential projects: new render core, smooth day/night, neighbourhood rebuilt from OpenStreetMap, baked lighting, a 79-object asset library; photoreal Cycles stills and a Unity port.

AI & Systems Engineer — Lucentive

Remote · Apr 2026 – Sep 2026 · also sole developer of Lucentive Games

- Built Aura's agent-to-agent client: signed service discovery, fail-closed JWS/JWKS verification, JSON-RPC over bounded SSE, covered by 33 adversarial tests.
- Conceived and built Icarus (first commit, 72 of 74 commits), an AI app factory with provider-agnostic multi-model orchestration and build and verification gates.
- Designed Lucentive One identity infrastructure: OIDC single sign-on and passkeys; extended merge-safety CI checks and adversarial test coverage.

Independent Software Engineer — Kölja

São Paulo · 2010 – present

- Self-employed developer of games, applications and AI tools for 15+ years, including Nightmare Engine, a released horror game on my own retro-graphics engine. Founded the Kölja games and music studio in 2026.
- Since Sep 2026: Retrofone and Retrotv for Android, with a store that sells signed game cartridges by PIX (Cloudflare Worker, Ed25519 licences); KÖLJA TV, a 24-hour channel on the web; Halo Tactics, a free fan game on itch.io.

SELECTED PROJECTS

Salt Meridian — multiplayer pirate trading game

Godot 4.7 · creator & technical director · released on itch.io

- Real sailing physics: buoyancy from the hull's own volumes, sail lift and drag from the apparent wind, a rudder that stalls.
- Server-authoritative multiplayer with every connection encrypted (DTLS); accounts with challenge-response sign-in, staff roles and an audit log.
- AI bot captains that sail, trade and fight under the same physics as players. About 68,000 lines of GDScript and 208 test suites, built with AI coding agents under my direction.

Orion OS — amnesic microkernel operating system

C · x86 + ARM64 · creator · v0.16

- Capability-based IPC with drivers, TCP/IP and TLS as user-space processes; runs from RAM with one encrypted vault; desktop, web browser, PDF reader, VPN and a Delphi-style IDE for its own language.

EDUCATION & LANGUAGES

Artificial Intelligence & Advanced Data-Science Tools — Universidade Presbiteriana Mackenzie · 2020

Postgraduate specialization in Law — IFRS · 2025

Languages: Portuguese (native) · English (fluent) · Spanish (professional working)
